DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to compositions for cleaning optical elements, classified in class 510, subclass 163.
 - II. Claims 7-10, drawn to method of making a single fluoride crystal from a molten state, classified in class 117, subclass 73.
 - III. Claims 11-14, drawn to compositions and methods of etching a metal fluoride crystal, classified in class 252, subclass 79.3.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. Although each of the claimed groups are used in the same process, each of the claimed inventions are directed to wholly distinct aspects of this process. For example, the cleaning composition and the method of cleaning a crystal are wholly distinct from the formation of the crystal itself.
3. The current examiner is most familiar with the compositions and methods of cleaning. Should the applicant decide to elect group II, the case will probably be transferred. Should the applicant choose group 1, it may be possible, upon finding an allowable composition, to rejoin

the methods of using such allowable compositions for the purpose of cleaning/etching the crystal.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
